EDUCATION

Vellore Institute of Technology

Bachelor of Technology, Computer Science Engineering

Vellore

SKILLS

- **Languages:** Python, JavaScript, TypeScript, ReactJS, HTML/CSS, C++
- **Database:** MySQL, Postgres SQL, DynamoDB, CosmosDB, Redis
- **Machine Learning:** LLM, BERT/RoBERTa, OpenCV, RAG, LangChain, LangGraph
- **Automation:** n8n, Zapier, BluePrism, UiPath, Notion
- **Technologies:** AWS Cloud, Azure Cloud, Git Version Control, MS Office, Docker

WORK EXPERIENCE

Barclays Bank PLC

Robotic Process Automation Developer

Pune

October 2022 - January 2025

- Collaborated with Business Analysts to gather and define requirements resulting in automation of 8+ end-to-end business processes using **BluePrism** and **UiPath**; responsible for managing bot workloads, control room queues, and production deployments.
- Extended **BluePrism** RPA capabilities by integrating Python scripts for tasks beyond native support, including unstructured document handling and intelligent data extraction
- Embedded fine-tuned **BERT/RoBERTa** models into RPA workflows for document classification (87% macro F1 score across 30 classes).
- Enabled semantic search over 4M+ archived contracts using **Sentence-BERT + FAISS**; later extended as **RAG** and integrated into an LLM based chat bot using **LangChain**
- Built OCR + CV pipeline (Detectron2 → Tesseract → OpenCV) for scanned KYC forms; improved field-level recall from 78% to 92%
- Conducted a Proof of Concept (PoC) for migration of existing BluePrism automations to **n8n**. Reported a decrease in delivery time and a reduction in failure rates for the tested samples by 37%.

Vodafone Intelligent Solutions

Graduate Engineer

Pune

August 2021 - October 2022

- Developed an Advanced Customer Service Chatbot using **Python (FastAPI)** with AI integrations. Built a **ReactJS** frontend for web & mobile platforms
- Designed a **ReactJS** chat bubble component per **Figma** specifications, integrating it into the chat screen
- Implemented comprehensive unit testing using **Jest** and integration testing using **Pytest**, ensuring a robust software experience.
- Followed **SAFe Agile** principles & methodologies, conducting end-to-end testing, including integrations with third parties
- Conducted functional & black-box testing, data analysis, performance testing & API testing using **SoapUI**

FREELANCE PROJECTS

EcoConnect Alert Workflow

n8n Automation Developer

Remote

March 2025 - June 2025

- Designed and deployed an n8n workflow to monitor environmental data sources and auto-generate alerts on abnormal readings
- Integrated with **Slack API** to deliver real-time alerts to subscribed environmental teams with structured messages
- Automated Telegram updates using **Telegram Bot API** for public-facing alerts on air quality and temperature anomalies
- Integrated n8n with FastAPI web app to process incoming data and apply conditional triggers for alerts

RetailNow Notification System

n8n Automation Developer

Remote

January 2025 - Present

- Built an n8n-based workflow for inventory threshold monitoring and automated vendor notifications
- Integrated with **Amazon RDS** for querying real-time stock levels across multiple stores
- Configured conditional routing to notify different vendor teams via Telegram, based on stock type and urgency
- Designed retry and escalation logic for failed message delivery and critical supply issues
